Goals & motivations	Help me discover something tasty to eat right now	Help me get to my food options quickly	Help me see what's available near me	Help me find exactly what I'm craving	Help me decide if this dish is worth ordering	Help me build my order easily	Help me save money on this order	Help me pay quickly and securely	Help me know when to expect my food	Help me know exactly when my food will arrive	Help me get my food while it's hot and correct	Help me share my experience easily	Help me discover food I'll actually like	Help me reorder without starting from scratch	Help me get rewarded for ordering often
*Help me... - or *Help me avoid... - at each step															
Positive moments	Seeing appealing food photos and offers is exciting		Wide variety of cuisines makes browsing fun, like window shopping		High-quality photos and reviews build confidence in the choice			Fast, one-tap payment options feel effortless		Real-time tracking is reassuring and reduces anxiety	Food arrives hot and matches what was ordered			Reordering favourites in one tap saves time and feels convenient	
What's enjoyable, fun, or delightful?				Too many filters and results can feel overwhelming		Hidden delivery fees or minimum order amounts feel frustrating	Coupons sometimes fail to apply, causing frustration		Estimated delivery times are sometimes inaccurate	Delivery delays with little explanation cause anxiety	Occasionally items are missing or the order arrives cold	Writing a review feels like extra effort, so many skip it			
What's frustrating, confusing, or costly?															
Areas of opportunity	Could we send smarter, time-of-day based meal suggestions?			Could we simplify filters into quick presets (e.g. "Under 30 mins")?		Could we show all fees upfront before checkout to avoid surprises?	Could we auto-apply the best available offer for the customer?		Could we improve ETA accuracy using live traffic & kitchen-load data?		Could we add live packaging/quality checks before dispatch?	Could we simplify reviews to one-tap ratings with optional comments?	Could we let customers set cuisine preferences for better recommendations?		
How might we make each step better?
