Customer Journey Map

Date	18 July 2026
Team ID	SWTID-2026-2426
Project Name	Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits
Team Members	Gorentla Sri Chaitra, Chandhana K

Customer Journey Map:

A customer journey map visualizes the end-to-end experience a person has with a product or service, from first becoming aware of it through using it and returning to it again. It captures steps, touchpoints, goals, emotional highs and lows, and opportunities for improvement at each stage.

The map on the following page traces the journey of the project's primary persona — a busy working professional (from Problem Statement PS-1 and the team's empathy map) — as they discover, order from, and return to a food delivery app, across five phases: Entice, Enter, Engage, Exit, and Extend.

Food Ordering & Delivery Journey

SCENARIO												
Browsing, ordering, tracking, and rating a food delivery order	Entice			Enter			Engage			Exit		
	How does someone initially become aware of the app?			What do people experience as they begin the process?			In the core moments in the process, what happens?			What do people typically experience as it finishes?		
Steps	Sees app ad or offer	Colleague recommends app	Downloads & opens app	Browses restaurants & menu	Adds items to cart	Applies coupon/discount	Completes payment	Tracks order live	Receives delivery	Rates & reviews order	Views receipt/summary	Reorders a favorite meal
	Scrolls social media and sees a food delivery ad with a first order discount.	A coworker mentions a reliable app during a lunch-break chat.	Installs the app and logs in with phone number or email.	Sets delivery address and scrolls nearby restaurant listings.	Selects a dish, customizes it, and adds it to the cart.	Looks for and applies a promo code before checkout.	Chooses UPI, card, wallet, or cash and confirms the order.	Watches the delivery partner's location and ETA update in real time.	Meets the delivery partner and receives the order.	Prompted in-app to rate the food, delivery, and overall experience.	Checks order history and receipt for the final billed amount.	Uses the reorder shortcut to repeat a past order on a busy day.
Interactions	Instagram / Facebook ads • App store listing	Word of mouth • Office group chat	Mobile app / App Store • QTV sign screen	Home screen restaurant list • Search & filter bar	Menu item detail screen • Cart icon	Offers/coupons page • Cart summary screen	Payment gateway • UPI apps	Live tracking map • SMS / push notifications	Delivery partner • Front door / lobby	Post-order rating modal • Push notification	Order history screen • Email receipt	Reorder button on home screen • Order history
Goals & motivations	Help me discover a convenient way to get food delivered	Help me trust an app before I install it	Help me get started without a long sign-up	Help me quickly find something that fits my mood and budget	Help me build an order that matches my craving	Help me get the best possible price	Help me pay quickly and securely	Help me know exactly when my food will arrive	Help me get my food while it's still fresh and hot	Help me quickly share feedback without much effort	Help me confirm I was charged the right amount	Help me save time on days I don't want to decide
Positive moments	Excitement about a bold first order discount	Reassuring to hear a peer's real experience		Enjoys browsing photos of dishes	Likes clear photos and customization options			Reassuring to see the rider approaching			Clear itemized receipt builds trust	Loves the one-tap reorder shortcut
Negative moments			Too many permissions requested upfront	Overwhelmed by too many similar options		Coupon fails without a clear explanation	Hidden delivery/platform fees appear only now	ETA changes repeatedly, causing frustration	Delivery partner lacks change for cash payment	Rating flow feels long for a quick opinion		
Areas of opportunity	How might we target ads by time of day (lunch/dinner)?		How might we simplify onboarding to two taps?			How might we clearly show why a coupon didn't apply?	How might we show the full price breakdown earlier?		How might we make cash-on-delivery smoother?	How might we make rating a one-tap action?		How might we personalize by cuisine history, not just discounts?
