

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	18 July 2026
Team ID	SWTID-2026-2426
Project Name	Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Data Collection & Preprocessing	Import order data from CSV / Excel / database sources Clean data: handle missing values, duplicates and inconsistent formats
FR-2	Data Modelling	Create calculated fields for metrics (e.g. average order value, delivery time) Structure data by City, Cuisine, Meal Type and Order attributes
FR-3	Dashboard & Visualization Creation	Build interactive Tableau dashboards and charts Create maps, KPI tiles, trend lines and comparison views
FR-4	Order Trend Analysis	Analyse order volume and order value by City and Cuisine Identify top-performing cities and high-demand cuisines
FR-5	Delivery Performance Analysis	Analyse delivery time distribution across cities Identify delays, bottlenecks and inefficiencies in delivery
FR-6	Customer Behaviour & Meal-Time Analysis	Identify peak mealtimes (breakfast / lunch / dinner) Study customer preferences by cuisine and meal type
FR-7	Dashboard Publishing & Sharing	Publish dashboards to Tableau Server / Tableau Cloud Provide role-based access for Business Analyst, Operations Manager and other stakeholders
FR-8	Reporting & Insights	Generate summary reports of key insights and trends Enable filtering and drill-down for deeper analysis

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Dashboards should be intuitive and easy to interpret for both technical and non-technical stakeholders such as Business Analysts and Operations Managers.
NFR-2	Security	Access to dashboards and underlying data should be restricted through role-based permissions on Tableau Server / Cloud.
NFR-3	Reliability	Visualizations must consistently and accurately reflect the underlying order, delivery and customer data.

FR No.	Non-Functional Requirement	Description
NFR-4	Performance	Dashboards should render quickly and respond promptly to filters even when working with large volumes of order data.
NFR-5	Availability	Published dashboards should be accessible on demand via Tableau Cloud / Tableau Server whenever stakeholders need them.
NFR-6	Scalability	The solution should accommodate growing data volumes, additional cities, and new cuisines without requiring redesign.
