Team ID	SWTID-2026-2426
Project Name	Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits
Team Members	Gorentla Sri Chaitra, Chandhana K
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users. Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Team Empathy Map: Food Ordering & Delivery App User

Persona: A working professional, aged 25–35, who orders food on most weekdays because of a busy schedule (based on Problem Statement PS-1).

This empathy map reflects patterns gathered from the team's brainstorm and problem statements: the persona values speed and transparency, is influenced by word-of-mouth and in-app offers, and is most frustrated by unpredictable delivery times and hidden charges — insights that will guide the structured analysis of consumer choices and habits.
