

Tableau Dashboard & Story

Date	18 july 2026
Team Id	SWTID-2026-2426
Project Name	Food Ordering Behaviour and Consumer Trends: A Structured Analysis of Choices and Habits

Dashboard:

The Tableau dashboard provides an interactive visualization of food ordering behavior and consumer trends. It combines key performance indicators (KPIs), charts, and filters to analyze order volume, customer preferences, delivery performance, revenue, and city-wise demand. The dashboard helps users explore data efficiently and supports informed business decision-making.

Story:

The Tableau Story presents the analysis in a logical sequence by combining multiple dashboards. It highlights customer ordering patterns, cuisine preferences, revenue contribution, delivery performance, and regional demand. The story helps stakeholders understand business trends, identify opportunities for improvement, and make data-driven decisions.

City vs cuisine

Orders by age group & restaurant type

Cuisine Preference Distribution

company & meal type orders

Revenue contributing by meal type

Delivery time distribution

Order intelligence :Cuisine, Timing &spend;

Meal type vs customer rating

Top 5 cities by order volume
